Gigahertz Optik GmbH 1/7

Description

BTS2048-IR spectroradiometer with thermoelectrically cooled detector

The BTS2048-IR incorporates thermoelectric cooling of its InGaAs array detector and also a cooled InGaAs Diode for the BTS technology. The device meets all the requirements of a highend diode array spectroradiometer and is favourably priced despite its cutting-edge design. Thermoelectric cooling of the array detector minimizes the dark noise signal.

Innovative detector technology

In order to make use of the advantages of an InGaAs chip that is less noisy compared to an extended InGaAs chip in the possible spectral ranges, a detector chip with both technologies is used. This matches the spectral ranges optimally and thus allows the best electro-optical properties. Other features such as an electronic shutter, OD filter and the proven BTS technology find their place as usual.

Features on a glance

- Spectral range from 950 nm to 2150 nm
- BTS technology (integrated additional diode)
- Electronic shutter and filter wheel with four positions (open, dark, OD1 and OD2)
- Convincing optical properties
- · Compact dimensions
- Fast data transmission due to Ethernet and USB interface
- I/O connector
- Traceable calibration

User software and developer software

The standard <u>S-BTS2048</u> user software has a customizable user interface and a large number of display and function modules that can be activated when configuring the BTS2048-IR with the respective accessory components from Gigahertz-Optik GmbH. The <u>S-SDK-BTS2048</u> developer software is offered for the integration of the BTS2048-IR in custom software.

Calibration

One essential quality feature of photometric devices is their precise and traceable calibration. The BTS2048-IR is calibrated by Gigahertz-Optik's calibration laboratory that was accredited by DAkkS (D-K-15047-01-00) for the *spectral responsivity* and *spectral irradiance* according to ISO/IEC 17025. The calibration also included the corresponding accessory components. Every device is delivered with its respective calibration certificate.

Specifications

General	
Short description	TE cooled spectroradiometer with a wide dynamic range for CW and short-term measurement of the irradiance, spectrum, and peak wavelength. Accessories for other parameters.
Main features	Compact device. BiTec detector with TE cooled detector (512 pixels, 9 nm optical resolution, electronic shutter), and additional InGaAs diode. Optical bandwidth correction (CIE214). Filter wheel with shutter and OD-Filter. Input lens with diffusor window. Cosine field of view.

Gigahertz Optik GmbH 3/7

Spectral irradiance responsivity range (spectral measurement)

Integral Detector			
Measurement range	Nine (9) measurement ranges with offset correction		
Measurement range	Optional: (15 to 6E7) W/m ²		
	responsivity range: (1050 - 2100) nm		
Filter	Optional: Spectral responsivity with radiometric matching. Online correction of the radiometric matching through spectral measurement data (spectral missmatch factor correction).		
Miscellaneous			
Microprocessor	32bit for device control,16bit for detector array control, 8bit for photodiode control		
Interface	USB V2.0, Ethernet (LAN UDP protocol), RS232, RS485		
Data transfer	Standard for 512 float array values via ethernet 5 ms		
Input Interfaces	2x (0 - 25) VDC, 1x optocoupler isolated 5 V / 5 mA		
Output Interfaces	2x open collector, max. 25 V, max. 500 mA		
Trigger	Trigger input incorporated (different options, rising/falling edge, delayed, etc.)		
Software	User software S-BTS2048 Optional software development kit S-SDK-BTS2048 for user software set-ups based on .dll's in C, C++,C# or in LabView.		
Power Supply	With power supply: DC Input 5V (±10 %) at 3000 mA		
Temperature range	Temperature stabilization chip: ≤ ± 0.25 °C		
Dimensions	135 mm x 107 mm x 90 mm (Length x Width x Height)		
Weight	1000g		
Mounting	Tripod and M6 screw threads		
	Front adapter UMPA-1.0-HL for use with integrating sphere port-frame UMPF-1.0-HL		
Temperature range	Storage: (-10 to 50) °C		
	Operation: (10 to 30) °C *9		

Gigahertz Optik GmbH 4/7

- * 1 typical value measured without averaging with an integration time of 1ms (standard deviation). With averaging the base line noise reduces.
- * 2 typical value measured without averaging with a measuring time of 1ms and full saturation of the detector. With averaging the SNR increases.
- *9 The device takes about 25 minutes to stabilize in temperature. If measurements are taken in the warm-up phase or at non-constant temperatures, a new dark measurement is required for each measurement.
- *10 The chip is basend on two different materials depending on the spectral range. Upper half (extendend InGaAs) may show a higher uncertainty at longer integration times.
- *11 At longer integration times the possible saturation for the extendend InGaAs range may be limited by ambient temperature

Contact, Calibration, Service & Support

We are known worldwide for excellent technical consulting and after sales support. Contact us to find together the best solution for you. Our services:

- Technical Consulting & Sales
- After-Sales Support
- Calibrations & Re-Calibrations (<u>ISO/IEC 17025 Calibration Services, factory calibration</u>, <u>Calibration of Third-Party Products</u>)
- Repairs & Updates
- OEM & Feasibility Consulting of Customized Solutions

<u>Send us your inquiry</u> or contact us by phone or e-mail. We would welcome your feedback too or review us on <u>Google</u>.
